Knaps Narrows, shoaling in channel
The channel for Knaps Narrows was last dredged in 2007. The channel was supposed to be dredged in 2012. The Corps of Engineers finally approved funds for the dredging of Knaps Narrows at the beginning of 2016 (W912DR-16-B-0003). The dredging contract was then cancelled by the Corps of Engineers. The shoaling is from the start of the markers to the Tighman Island Inn. At the middle depth is as low as 2-3 feet. The channel is still deep, it is only shoaling in channel.
